# Data Sheet

# **Dual Channel Function/Arbitrary Waveform Generators** 4060B Series

The 4060B Series Dual Channel Function/Arbitrary Waveform Generators are capable of producing precise sine, square, triangle, pulse, and arbitrary waveforms. This series combines the cost saving benefits of both DDS and true point-by-point arbitrary architectures to meet a wide range of applications that require high signal fidelity and low jitter arbitrary waveform generation capabilities.

### **Dual architecture operation**

The 4060B Series arbitrary waveform generator (AWG) architecture can be toggled between conventional DDS or true arbitrary mode. Compared to DDS (Fig. 1), true point-by-point AWG implementation offers improved signal integrity by producing lower jitter and less distortion (Fig. 2). All models are capable of generating 16-bit waveforms up to 300 MSa/s in DDS or 75 MSa/s in true arbitrary mode.

The intuitive touchscreen display simplifies control of many features including extensive waveform modulation schemes, linear/logarithmic sweep, burst mode, and variable DC offset. These generators provide system integrators with auxiliary triggering capabilities, and a 10 MHz reference clock for synchionizing multiple instruments.

196 built-in arbitrary waveforms offer a variety of arbitrary test signals for both simple and complex applications. Generate custom arbitrary waveforms and download them to the instrument using the included application software. Alternatively, use the included LabVIEW<sup>™</sup> drivers to load .csv or .txt waveform data files directly into the generator's internal memory.

Model	4062B	4063B	4064B
Sine frequency range	l µHz to 40 MHz	I µHz to 80 MHz	I µHz to I20 MHz
Square frequency range		I µHz to 25 MHz	

### Features and benefits

- I6-bit resolution, 8 Mpts, 300 MSa/s (DDS), 75 MSa/s (true point-by-point) arbitrary waveform generator
- Up to I.2 GSa/s sample rate for sine, square, triangle, and pulse waveforms
- Two independent channels with one-button phase synchronization
- Channel copy, track. and waveform combine functions
- Generate sine waves up to I20 MHz
- Harmonic generator function
- Linear sweep, logarithmic sweep, and burst functions
- Precise pulse width and rise/fall time adjustments
- Supports AM/DSB-AM/FM//PM/PSK/FSK/ASK and PWM modulation types
- DC signal level up to ±10 V into a high-z load or ±5 V into a 50 Ω load
- Variable DC offset
- Adjustable duty cycle
- Frequency counter
- internal/external triggering
- I96 built-in predefined arbitrary waveforms
- Store/recall up to IO Instrument settings
- LAN and USB device port (USBTMC-compliant)
- GPIB connectivity with optional USB-to-GPIB adapter
- Front-panel USB host port
- Arbitrary waveform editing software included
- LabVIEWTM driver is available

### **Front panel**

### **Rear panel**

## **Operation highlights**

### Generate precise true arbitrary waveforms

True arbitrary mode uses a variable clock signal to generate precise custom arbitrary waveforms without skipping data points. As shown in the oscilloscope view above, the 8 million point arbitrary waveform is accurately reproduced with high signal fidelity.

### Versatile DDS operation

Bullt-in arbitrary waveform at 20 MHz. 300 MSa/s

In DDS mode, these generators are capable of producing arbitrary waveforms at a frequency up to 20 MHz. DDS arbitrary waveforms can also be combined with modulation, sweep, and burst functions.

#### High-performance pulse generator

This series is equipped with advanced digital signal processing to reduce jitter and produce clean pulse waveforms.

The pulse width is adjustable to a minimum of 16.3 ns. Shown above is the oscilloscope view of the pulse width being incremented using the generators rotary control knob.

Sharp rise/fall times can be set from 8.4 ns up to 22.4 s with adjustment steps as small as 100 ps.

### 16-bit vertical resolution

The 4060B Series uses 16-bit sampling for enhanced resolution resulting in lower distortion and more accurate waveforms.

#### Modulation types and operating modes

Carrier	AM/DSB-AM/FM/ PM/PSK/FSK/ASK	PWM	Burst	Sweep
Sine and Square	√		$\checkmark$	√
Triangle / Ramp	$\checkmark$		$\checkmark$	$\checkmark$
Pulse		$\checkmark$	$\checkmark$	
Noise			$\checkmark$	
Arbitrary	√		$\checkmark$	$\checkmark$

These generators are capable of many different modulation types for various applications.

# **Operation highlights**

### Channel copy and sync function

With the push of a button, all waveform parameters can be quickly copied between channels. Phase between channels can be adjusted.

### Flexible phase control

Phase-lock maintains phase deviation over both channels. In Independent mode, the phase deviation between CHI and CH2 changes at random allowing for smoother frequency transitions.

### **Frequency counter**

		Counte	er:ON		
	Frequency	Pwidth	Duty	Freq Dev	,
Value	1.000 000 1kHz	502.306us	50.2 %	> 1 000 0	00.000ppm
Mean	999.999 98 Hz	502.307us	50.2 %	> 1 000 0	00.000ppm
Min	999.999 77 Hz	502.304us	50.2 %	> 1 000 0	00.000ppm
Max	1.000 000 1kHz	502.311us	50.2 %	> 1 000 0	00.000ppm
Sdev	128.572 84uHz	2.5ns	248 u%	2.136ppr	n
Num	4	4	4	4	
TrigLe	v 0.0	00 V			C 🚺
State	Frequency	Pwidth	RefFreq	Satus	Class
On	Period	Nwidth P	Trialev	Setup	Ciedi

Displays mean, min. max, and many other frequency characteristics with an input frequency range of 0.1 Hz to 200 MHz.

### **Channel tracking function**

Customize channel coupling using frequency, amplitude, and phase. Enable automatic tracking between channels using deviation or ratio.

### Harmonics function

Quickly output harmonics up to the 16th order with independent amplitude and phase settings.

### **Channel combine function**

Create complex waveforms by Internally adding each channel's waveform and outputting the combined waveform on channel 1 or 2.

#### Sweep

	^CH1:Sine	,	<b>1</b>	CH2:Sine	
		A.	Frequency Amplitude Offset Phase	1.000 00 4.000 Vp 0.000 Vc 0.000 0 °	0kHz ip lc
Sweep T Mid Frec Freq Sp:	ime <mark>1</mark> .000 0   1.000 0 an 1.000 0	000 s 000kHz 000kHz	Load Output	HiZ OFF	C 🔒 📩
Sweep	StartFreq ContorFreq	StopFreq	Source	Trig Out	Page

Perform linear or log sweep functions with up or down directional control. The sweep source can be set to internal, external. or manual.

The provided waveform editing software can be used to create point-by-point arbitrary waveforms via freehand or waveform math functions. The standard LAN and USBTMC-compliant interfaces on the rear panel allow users to easily interface with a PC to load these waveforms into internal memory. The front panel also offers a convenient USB host port to save/recall instrument settings and waveform files on a USB flash drive.

# **Specifications**

Note: All specifications apply to the unit after a temperature stabilization time of 30 minutes over an ambient temperature range of 23 °C  $\pm$  5 °C.
