CALIBRATION WEIGHTS

Ensuring your weighing is
accurate and precise

AND
A&D Weighing

Calibration Weights

Calibration weights are designed in cast iron or stainless-steel. Weights are used to calibrate weighing equipment and manufactured and laboratory compared to a known standard. To maintain your weighing device accuracy and for Legal for Trade applications, it is important to use a reliable and certified test weight.

Applications:

- Calibration Class I & II balance in accordance to Handbook 44
- Student laboratory use
- Rough weighing operations
- Tolerance testing
- Verification checks
- Calibration shift test & calibration adjustments
- Sensitivity testing

Selecting Calibration Weights

Materials & Features:

- Stainless steel polished finish
- Meets ASTM E617-19
- USP-41 compliant
- Nominal value marked on weight
- Serial Number applied to case

Style Available:

- Type I design (one piece) for ASTM Class 0
- Type II design (screw-knob) for ASTM Class I-4 with sealing cavity for adjustment of material

	Cast Iron	Stainless Steel
Application Use	Test industrial weighing devices, non-marked scales without class designation, check acceptable tolerance	Test Class III scales and balances, non-classified scales, check acceptable tolerance
Balance / Scale Classification	Class III / Non-designated	Class III
Marked for Consistency	○	✓
Serial Number	○	Optional
Approvals	NIST Handbook 44 and 105-1 specifications	NIST Handbook 44 and 105-1 specifications, Class F tolerances
Styles	<ul style="list-style-type: none"> • Grip handle • Nesting slab • Slotted 	<ul style="list-style-type: none"> • Cylindrical • Grip handle • Leaf • Dish
Weight Class	<ul style="list-style-type: none"> • ASTM Class 6 and 7 • OIML Class M1 and M2 	<ul style="list-style-type: none"> • ASTM Class 5,6,7

Most weights have a sealing cavity for adjustment, and the nominal value is marked on the test weight with an optional serial number stamp

***Precision Laboratory Test Weights**

ASTM Class 0 test weights are not individually marked with their weight value or individually serialized per ASTM E 617-13. Single-piece cylindrical test weights are Type I, ASTM Class 0 and OIML Class E1 and E2, and F1 and F2 with a one-piece construction. These weights have no added adjusting material. Type II designs are cylindrical weights with adjusting cavities.

Test Weights and Configurations

A&D offers test weights as Individual weights, Cal-pal kits or Weight sets.

	Individual Weights	Cal-Pal Weight Kits	Weight Sets
Includes:	<ul style="list-style-type: none"> Test weight: 1 piece Vial or soft case Cotton glove 	<ul style="list-style-type: none"> Test weights: 3 pieces Vial or PVC hard case Tweezer or Lifter 	<ul style="list-style-type: none"> Test weights: 9 to 21 pieces Hard case (varies) White glove & Tweezer or Lifter

Individual Weights

Class I ASTM 1-piece test weight with screw knob test weight screw knob with sealing cavity or leaf, includes vial or soft case and cotton glove.

Cal-Pal Weight Kits

All cylindrical ASTM kits (excluding grip-handle weights) include their own protective hard case and glove set for safe handling.

Weight Sets

Sets may be ordered in a 5-2-2-1 or a 5-3-2-1 configuration. For example, a set might include:

- (1) 50 g weight, (2) 20 g weights, and (1) 10 g weight, or
- (1) 50 g weight, (1) 30 g weight, (1) 20 g weight, and (1) 10 g weight.

OIML and ASTM test weight sets larger than 500 grams, or one pound, include a hardwood case with velvet-lined pockets. Test weight sets with the largest weight of 500 grams include a precision-machined polyvinyl, crush-resistant case.

Serial numbers are not stamped on polished or milligram weights. A test weight should be more accurate than the precision of the weighing device, and it is recommended that a test weight has an accuracy of one-third the weighing device readability.

Product Configurations
