

# **ASR-3000 Series**

Programmable AC/DC Power Source

# **FEATURES**

- Output Rating: AC 0  $\sim$  400 Vrms, DC 0  $\sim$   $\pm$  570 V
- Output Frequency up to 999.9Hz (5kHz for ASR-3400HF only)
- DC Output (100% of Rated Power)
- Measurement Items: Vrms, Vavg, Vpeak, Irms, IpkH, lavg, Ipeak, P, S, Q, PF, CF
- Voltage and Current Harmonic Analysis (THDv, THDi)
- Remote Sensing Capability
- OCP, OPP, OTP, AC Fail Detection and Fan Fail Alarm
- Support Arbitrary Waveform Function
- Output Capacity: 2kVA/3kVA/4kVA
- Customized Phase Angle for Output On/Off
- Sequence and Simulation Function(up to 10 sets)
- Interface(std): USB, LAN, RS-232, GPIB
- Built-in External Control I/O and External Signal Input
- Built-in Output Relay Control
- Memory Function (up to 10 sets)
- · Built-in Web Server

5 Commonwealth Ave Woburn, MA 01801 Phone 781-665-1400 Toll Free 1-800-517-8431

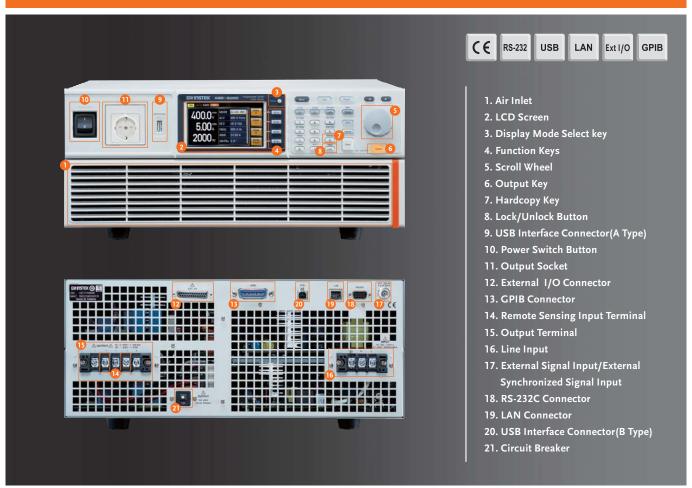

The ASR-3000 Series is an AC+DC power source, featuring high-speed DC voltage rising and falling time (≤100us). There are four models of the series: ASR-3200(2kVA), ASR-3300(3kVA) and ASR-3400/3400HF (4kVA). The series can provide rated power output during AC output and DC output. Ten ASR-3000 Series output modes are available, including 1) AC power output mode (AC-INT Mode), 2) DC power output mode (DC-INT Mode), 3) AC/DC power output mode (AC+DC-INT Mode), 4) External AC signal source mode (AC-EXT Mode), 5) External AC/DC signal source mode (AC+DC-EXT Mode), 6) External AC signal superimposition mode (AC-ADD Mode), 7) External AC/DC signal superimposition mode (AC+DC-ADD Mode), 8) External AC signal synchronization mode (AC-SYNC Mode), 9) External AC/DC signal synchronization mode (AC+DC-SYNC Mode)10) External DC voltage control of AC output mode(AC-VCA).

ASR-3000 Series is ideal for the development of On-board Chargers, Server Powers, LED modules, AC Motors, AC Fans, UPS and various electronic components, as well as for testing applications of automotive electrical equipment and home appliances.

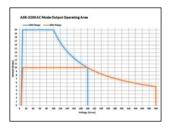

The ASR-3000 Series provides users with waveform output capabilities including 1) Sequence mode generates waveform fallings, surges, sags, changes and other abnormal power line conditions; 2) Arbitrary waveform function allows users to store/upload user-defined waveforms; and 3) Simulate mode simulates power outage, voltage rise, voltage fall, and frequency variations. When the ASR-3000 Series power source outputs, it can also measure Vrms, Vavg, Vpeak, Irms, Iavg, Ipeak, IpkH, P, S, Q, PF, CF, 100th-order Voltage Harmonic and Current Harmonic. In addition, the remote sensing function ensures accurate voltage output, and the Customized Phase Angle for Output On/Off function can set the start and end angles of the voltage output according to the test requirements. The protection limits of V-Limit, Ipeak-Limit and F-Limit can be set according to user requirements. Over voltage limit, OCP, OPP will protect the DUT during the output process. The Fan Fail Alarm function and the AC fail alarm function are also designed in the ASR-3000 Series.

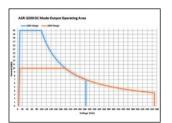

The front panel of the ASR-3000 Series provides a universal socket or a European socket, which allows users to plug and use so as to save wiring time. Since the power socket specification has a maximum current of 15A, the rear panel of ASR-3000 Series is designed with a current circuit breaker. When the socket current is greater than 15A, it will automatically open the circuit to protect users. The ASR-3000 Series supports I/O interface and is standardly equipped with USB, LAN, External I/O, RS-232C and GPIB.

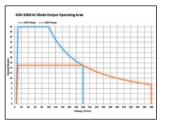

#### PANEL INTRODUCTION

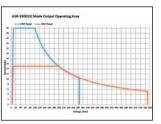

#### **OPERATING AREA FOR ASR-3000 SERIES**

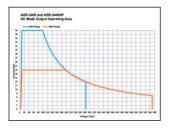

AC Output for ASR-3200

DC Output for ASR-3200

AC Output for ASR-3300

**Voltage Harmonic** 

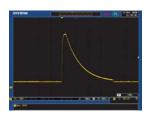

**Current Harmonic** 

The ASR-3000 Series provides users with measurement capabilities including Vrms, Vavg, Vpeak, Irms, Iavg, Ipeak, IpkH, P, S, Q, PF, CF, 100th-order Voltage Harmonic and Current Harmonic. During the power output, the measurement

parameters including Vrms/Irms, Vavg/Iavg and Vmax/Vmin/ Imax/ Imin can be switched by users at any time to display the instantaneous calculation reading.

# **SEQUENCE MODE AND BUILT-IN ISO-16750-2 WAVEFORMS**

SEQ6: Momentary Drop in **Supply Voltage** 

SEQ7: Reset Behavior at Voltage Drop with 12V System

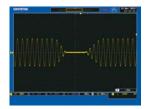

The sequence mode provides editable 10 sets of SEQ0~SEQ9, each set has 0~999 steps, each step time setting range is 0.0001~999.9999 seconds. Users can combine multiple sets of steps to generate the required waveforms, including waveform falling, surges, sags and other abnormal power line conditions to meet the needs of the test applications.

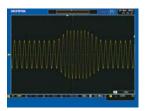

**SEQ8: Starting Profile** Waveform

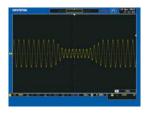

SEQ9: Load Dump with Tr\_10ms, Td\_40ms

In addition, ASR-3000 Series also built in common ISO-16750-2 test waveforms in the Sequence Mode preset waveforms, including Momentary Drop in Supply Voltage built in at SEQ6, Reset Behavior at Voltage Drop with 12V system built in at SEQ7, Starting Profile Waveform built in at SEQ8 and Load Dump with Tr\_10ms, and Td\_40ms built in at SEQ9.

#### SIMULATE MODE

Simulate Mode can quickly simulate different transient waveforms, such as power outage, voltage rise, voltage fall, etc., for engineers to evaluate the impact of transient phenomena on the DUT. Ex: Capacitance durability test.

**Power Outage** 

Voltage Rise

Voltage Fall

### **FUNCTION WAVEFORM (ARBITRARY EDIT) MODE**

TRI Waveform

**STAIR Waveform** 

**CLIP Waveform** 

**SURGE Waveform** 

Fourier Series Synthesized Waveform

ASR-3000 Series provides more than 20,000 waveform combinations then the waveform is loaded into the ARB 1~16 waveform register in seven categories, allowing users to quickly simulate different AC voltage waveforms. Adjust the desired waveform type directly through the panel (displayed synchronously on the screen),

through the access procedures, and return to the main menu output mode to perform ARB Waveform output.

#### **PC SOFTWARE**

**Basic Controller** 

Sequence Mode

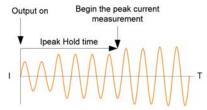

**ARB Waveform Edit** 

The Waveform is Observed with DSO

The ASR-3000 Series software includes basic settings, the Simulate Mode, the Sequence Mode, Data Log and the arbitrary waveform editing function. Users can directly set output voltage, frequency, start/stop phase on ASR-3000 Series through the software. The Simulate Mode can quickly simulate different transient waveforms such as power outage, voltage rise, voltage fall... etc.

The Sequence Mode can edit the editing parameters read back from ASR-3000 Series, or directly edit the parameters and control ASR-3000 Series to output waveforms according to the set sequence. The arbitrary waveform editing function not only combines various waveforms, including sine waves, square waves, triangle waves, and noise waveforms, but also allows uses to draw arbitrary waveforms and output them.

#### T, IPK HOLD & IPK, HOLD FUNCTIONS

T, Ipk Measurement

T, Ipk Hold is used to set the delay time after the output (1ms  $\sim$ 60,000ms) to capture the Ipeak value and keep the maximum value. The update only functions when the measurement value is greater than the original value. The T, Ipk Hold delay time setting can be used to measure surge current at the power on process of the DUT.

Ipk Hold can be used to measure the transient surge current of the DUT at power on without using an oscilloscope and a current probe.

#### Н. **SLEW RATE MODE**

#### Time Mode

Slope Mode

The ASR-3000 Series can set the Slew Rate Mode to determine the rise time of the voltage according to the test requirements of the DUT. Slew  $\,$ Rate Mode provides "Time" and "Slope" modes. When setting "Time" mode, ASR-3000 Series can increase output to 10~90% of the set voltage within 100 $\mu s$ ; and when selecting "Slope" mode, ASR-3000 Series increases output voltage by a fixed rising slope of 1.5V/µs until reaching the set voltage value.

In addition, if users decide to self-define the rise time of the output voltage, users can flexibly set the rise time of the ASR-3000 Series voltage by editing the Sequence mode.

SPECIFICATIONS ASR-3200 ASR-3300 ASR-3400 ASR-3400HF \*1. The voltage display is set to RMS in AC/AC-DC mode and AVG in DC mode.

\*2. AC mode: For an output voltage of 20 V to 200 V / 40 V to 400 V and 23 "C ± 5 "C. DC mode: For an output voltage of 28.5 V to 285 V / 57 V to 570 V and 23 "C ± 5 "C.

\*3. An output current in the range of 5 % to 100 % of the maximum current, and 23 "C ± 5 "C. DC mode: For an output voltage of 5 % to 100 % of the maximum current in Are range of 5 % to 100 % of the maximum current in Are range of 5 % to 100 % of the maximum current in Are range of 5 % to 100 % of the maximum current in Are range of 5 % to 100 % of the maximum current in Are range of 5 % to 100 % of the maximum current in Are range of 5 % to 100 % of the maximum current in Are range of 5 % to 100 % of the maximum current, DC or an output frequency of 45 Hz to 65 Hz, and 23 "C ± 5 "C.

\*7. The reactive power is for the load with the power factor 0.5 or lower.

\*8. An output voltage in the range of 20 V to 200 V / 40 V to 400 V and 23 "C ± 5 "C. OTHERS

2kVA Programmable AC/DC Power Source 3kVA Programmable AC/DC Power Source ASR-3200 **ASR-3300** 4kVA Programmable AC/DC Power Source **ASR-3400** ASR-3400HF 4kVA Programmable AC/DC Power Source

#### CCESSORIES

CD (User manual/Programming manual), Safety guide, Input terminal cover, Output terminal cover Include remote sensing, GRA-442-E Rack mount adapter(EIA), GTL-246 USB Cable

**GPW-005** Power Cord, 3m, 105℃, UL/CSA Type GTL-248 GPIB Cable, approx. 2m **GPW-006** Power Cord, 3m,  $105^{\circ}$ C, VDE Type ASR-002 External three phase control GPW-007 Power Cord, 3m, 105°C, PSE Type GRA-442-J Rack mount adapter (JIS) unit for IP2W, IP3W, 3P4W output Output power wire(Load wire\_ 10AWG: 50A, 600V/Sense wire\_ 16AWG: 20A, 600V) APS-008 Air inlet filter GTL-137

\* European Output Outlet (factory installed)

**APS-008** 

**GPW-005** 

GRA-442-J

GTL-232 RS232C Cable, approx. 2m

GTL-137

#### ASR-002 External three phase control unit

- \* Basis Requirement of ASR-002 to ASR-Series
- 1. Must be the three same models of ASR-Series \* Functions of ASR-Series are limited when conducts to ASR-002
- No DC Output
   Measurement Items: only current(A), power(W) and PF for each phase
- No Voltage and Current Harmonic Analysis
   No Remote Sensing Capability
   No Arbitrary Waveform Function

- 6. No Sequence and Simulation Function
- Not supported External Control I/O

  No memory Function

  Only support USB, no LAN port for communication
