# Monitor your remote measurement points

DIRIS B meters communicate via RS485 Modbus and offer several communication protocols. Measurement and metering data can be displayed on a DIRIS D-30 remote screen or centralized and made available on an Ethernet network using a DIRIS-G communication gateway.

## Advantages

### Flexible

#### Multi-circuit

Ability to monitor several circuits thanks to four independent current inputs.

For example, it allows to measure or monitor:

- 1 three-phase load + 1 single-phase load,
- 4 single-phase loads.

#### Compact

Modular, 3 modules device.

### Connected

- Cabled (RS485).
- Multi-protocol: Modbus.
- Remote DIRIS D-30 screen for displaying measurement and metering data.
- Linked to a DIRIS G-30/50 gateway for centralization and communication of data via RS485 to Ethernet.

### Accurate

#### High accuracy of measurements

- Class 0.2 according to ANSI C12.20 for the meter alone.
- Class 0.5 according to IEC 61557-12 from 2% to 120% of rated current range for the full measurement chain (meters associated with TE/TF current sensors).

### Plug & Play

#### Rapid & reliable connection (RJ12) of current sensors

- Automatic detection of ratings and correction of current flow direction.
- Prevents wiring errors, allows disconnection of the current sensor secondary under load.

## System

# Associated current sensors **TE**, **TR** and **TF**

A rapid RJ12 connection makes wiring easy and reliable. The accuracy of the global measurement chain is guaranteed according to standard IEC 61557-12:

- class 0.5 with TE or TF current sensors,
- class 1 with TR current sensors.

RJ12 cables with fail-safe mechanisms are available; refer to the relevant pages of the catalogue.

## **TE** Solid current sensors

Suitable for new installations - Match the pitch of protective devices.
