

Moisture Meter for Hops

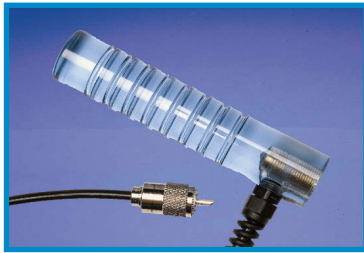

G-34

The G-34 is an essential tool for producing and storing baled hops. With a large analog display, built-in battery and calibration checks, and a rugged construction, this meter assures quality readings for post-drying inspection. The G-34 can be used with various electrodes in order to provide optimal moisture checking for baled hops.

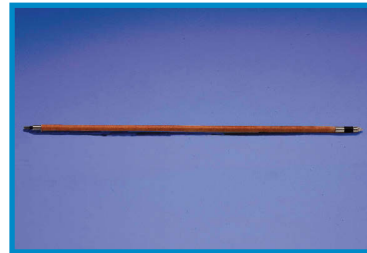

Electrodes and Accessories

H-4 Handle

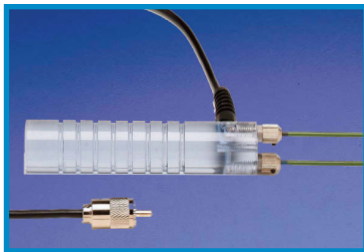

Electrode handle that attaches to the top of the meter. Used with 830-5 prod for baled hops.

830-5

12" prod for testing standard and high density baled hops (requires H-4 handle).

30-E/C

Used for bales, 9 1/2" insulated pins with 8 1/4" penetration. Eliminates effect of surface moisture.

MCS-44

8% and 10% electrical resistance values allow for accurate readings and calibration.
