Made in Germany

Compact, inexpensive, directional and highly sensitive

Aronia presents the new, high quality magnetic field tracking antennas of the MDF series, suitable for signal tracking and field strength measurement. Available in 5 different versions (2 passive, 3 active), the MDF covers an extremely broad frequency range from 9kHz to 400MHz.

Together with the MDF antennas, any regular Spectrum Analyzer transforms into a Magnetic Field Meter with tracking function in a few simple steps.

The special conversion factor of the MDF, in conjunction with a Power Meter showing dBm values, gives a direct dBA/m display with correct sign (power meter function).

Thanks to the high directionality of the antenna, the MDF is ideally suited for signal direction finding. This predestines the MDF to use as a radio direction finder or to locate illegal or unwanted interference.

Designed and manufactured in Germany, each MDF Antenna stands for highest quality standards.

Scope of Delivery

Included in delivery is a sturdy, waterproof carrying case with foam insert (only active (X) versions) for the antenna and accessories. Furthermore, every MDF antenna comes with a detachable pistol grip with mini tripod function.

Lots of space for accessories: the watertight transport case (included in delivery with active MDF (X) versions)
