AirMagnet[®] Planner Wireless Network Planning Tool

Overview

Haphazard planning of a wireless deployment can lead to overspending, as well as underserved and less-than-thrilled endusers. AirMagnet Planner is a Wi-Fi network planning tool that saves time, money, and frustration by accounting for building materials, obstructions, access point configurations, antenna patterns and a host of other variables to provide a predictive map of Wi-Fi signal and performance, before the network or physical building is constructed.

- Plan and design Wi-Fi 6/6E networks without physically rolling out any APs
- Optimize AP count and layout for maximized coverage and performance by modeling building construction materials/obstructions and AP placement
- Reduce time spent planning by quickly importing walls from CAD floorplans
- Estimate Wi-Fi deployment budgets; generate installer-ready BOM reports
- Plan migration strategies as new users or technologies are introduced

Key Features

📼 Sophisticated WLAN Modeling

AirMagnet Planner makes it easy to build a detailed model of any wireless environment - even before the network is deployed or the building is constructed. Simply load in a map of the location and use the built-in library of walls, doors, and windows to precisely match the building's characteristics.

AirMagnet Planner allows users to add APs to any location and experiment to find the ideal placement within the environment, based on their requirements. AirMagnet Planner also provides independent settings for 2.4 GHz, 5 GHz, and 6 GHz radios. Users can set the AP channel, IP address, transmit power, antenna type, orientation, height, and 802.11 specifications. After the planning session is complete, users can generate a professional Bill of Materials report that includes the necessary information to properly install the network. Along with RF coverage information, users can access performance metrics such as data rates and throughput.

An "advisor feature" is included with AirMagnet Planner to automatically place APs on-site floor plans. Users can specify the minimum signal coverage expected, the transmit power, the media type of the AP, and more while marking Wi-Fi coverage areas and areas where APs cannot be placed.

Automated WLAN Modeling

DATA SHEET

🕑 Automatic Wall Extraction (AWE)

Users can reduce the amount of time spent preparing a floor plan for wireless deployment by quickly importing walls from CAD floor plans with only a few clicks of the mouse. Each CAD layer can be individually selected and given a unique attenuation type.

Automatic Wall Extraction

(802.11) Wi-Fi Modeling

With AirMagnet Planner, users can design new Wi-Fi 6/6E networks, as well as plan their migration strategies for existing legacy networks, including one-to-one replacements or the phased introduction of devices into their legacy network. Users can plan their deployments for user capacity or performance without any physical AP rollout. AirMagnet Planner provides unique coverage maps for WLAN throughput and other technology specific heat maps such as signal coverage, Operating Modes, MCS Transmit Rate, Channel Width and Channel Overlap, to predict the WLAN performance at every location on the floor and offer the best design that minimizes any rework once the network is deployed.

🐻 Custom Antenna Design

AirMagnet Planner includes over 400 of the most popular antenna patterns on the market for customizing APs, including Cisco, Aruba, Ruckus Wireless, Extreme Networks, Meru, Fortinet, Huawei, Meraki, Juniper Mist, and more. AirMagnet Planner also includes a builtin tool to create customized antenna patterns, allowing users to replicate the characteristics of literally any available antenna.

Multi-Floor Modeling using AirMagnet Planner

📚 Multi-Floor Modeling

When users plan and design wireless access in multi-floor buildings, reusing services of APs lower equipment deployment costs. AirMagnet Planner's multi-floor planning capability allows planners to capitalize on reusing services by visualizing coverage and performance via heat maps across floors, providing powerful insight into service bleed over onto adjacent floors.

Empower your organization with visualizations of signal strength, data rates, Operating Mode, MCS Transmit Rate, Channel Width, Channel Overlap between floors, and more.

Ordering Guide

Model Number/Name	Description
AM/A4012G	AirMagnet Planner (Standalone)
AM/A4018G	AirMagnet Survey PRO (includes Planner)

Support

Model Number/Name	Description
AM/A4012G-1YS	1 year AllyCare Support for AirMagnet Planner - AM/A4102G
AM/A4012G-3YS	3 year AllyCare Support for AirMagnet Planner - AM/A4102G
AM/A4018G-1YS	1 year AllyCare Support for AirMagnet Survey PRO (includes Planner) - AM/A4018G
AM/A4018G-3YS	3 year AllyCare Support for AirMagnet Survey PRO (includes Planner) - AM/A4018G
NOTE: The first year of AllyCare support is required for all AirMagnet products	

NOTE: The first year of AllyCare support is required for all AirMagnet products.

System Requirements

Laptop/Notebook/PC/Tablet PC

Operating Systems: Microsoft Windows 10 Pro/Enterprise 64-bit or Microsoft Windows 11 Pro/Enterprise 64-bit.

Intel[®] Core[™] i5 2GHz (Intel[®] Core[™] i7 or higher recommended)

4 GB (8 GB or higher recommended)

800 MB free hard disk space

A site map in a format supported by AirMagnet Planner (supported formats are: .bmp, .dib, .dwg, .dxf, .emf, .gif, vsd, .jpg, .wmf, .vdx or .png)

Apple[®] Macbook[®] PRO

Operating Systems: MAC OS X v10.5 (Leopard™) or higher running a supported Windows OS (as noted under Laptop/Notebook PC/Tablet PC section) using Boot Camp[®]

Intel[®] Core[™] i5 2GHz (Intel[®] Core[™] i7 or higher recommended)

4 GB (8 GB or higher recommended)

800 MB free hard disk space

A site map in a format supported by AirMagnet Planner (supported formats are: .bmp, .dib, .dwg, .dxf, .emf, .gif, vsd, .jpg, .wmf, .vdx or .png)
