RX SERIES MODULE - PHR XM-A

Single analyzer, dual input

This module allows two signals to be connected and a single connected SDI or Optical video signal to be monitored continuously.

Compatible with the Rx2000, Rx1000 and Rx500 instruments.

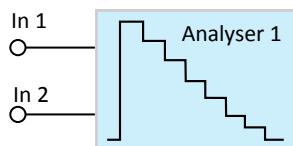

The analyser functionality allows two concurrently connected SD-SDI, HD-SDI or Optical inputs to be monitored in the form of a Picture, Vectorscope and Waveform monitor.

The Picture viewer give confidence that the signal is present and is the right feed.

The Vectorscope allows the colour hue, saturation and phase of the signal to be checked along with the bandwidth of the chrominance in the signal.

The Waveform monitor allows the levels of the luminance and colour components to be checked

The audio meter allows 16 channels of embedded Audio to be monitored and the levels can be inspected.
