

RX SERIES MODULE - PHRXM-AE Analyzer with eye jitter

This module allows a single connected SDI or Optical* video signal to be monitored continuously and allows the generation of a single SDI or Optical* video test signal.

Compatible with the Rx2000, Rx1000 and Rx500 instruments.

The analyser functionality allows two connected SD-SDI, HD-SDI or Optical inputs to be monitored.

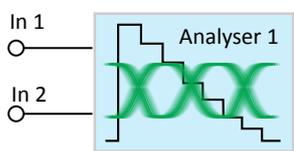

The Picture viewer give confidence that the signal is present and is the right feed.

The Vectorscope allows the colour hue, saturation and phase of the signal to be checked along with the bandwidth of the chrominance in the signal.

The Waveform monitor allows the levels of the luminance and colour components to be checked.

The Eye and Jitter displays allow jitter in the selected input to be monitored.

The audio meter allows 16 channels of embedded Audio to be monitored and the levels can be inspected.
