Function/Arbitrary Waveform Generators

Debug with Confidence

30 MHz – 60 MHz

Teledyne Test Tools T3AFG30 and T3AFG60 range of function/arbitrary generators are a series of dual-channel waveform generators with specifications of up to 60 MHz maximum bandwidth, 150MSa/s maximum sampling rate and 14-bit vertical resolution.

The proprietary Arbitrary & Pulse techniques used in the T3AFG30/T3AFG60 models helps to solve the weaknesses inherent in traditional DDS generators when generating arbitrary, square and pulse waveforms. With the above advantages the T3AFG30 and T3AFG60 generators can provide users with a variety of high fidelity and low jitter signals, which can meet the growing requirements of a wide range of complex applications.

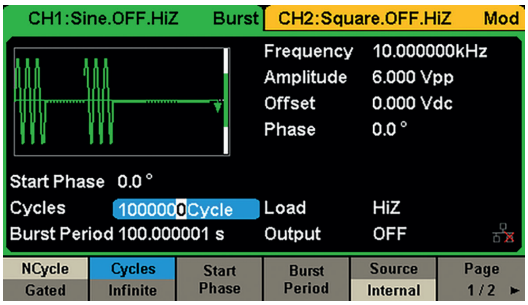
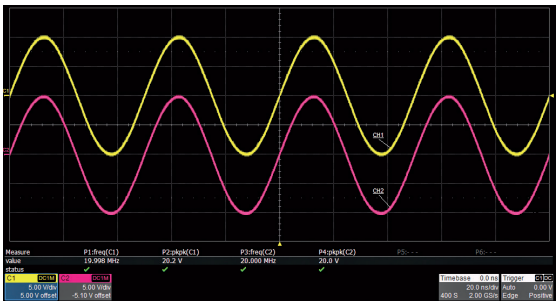
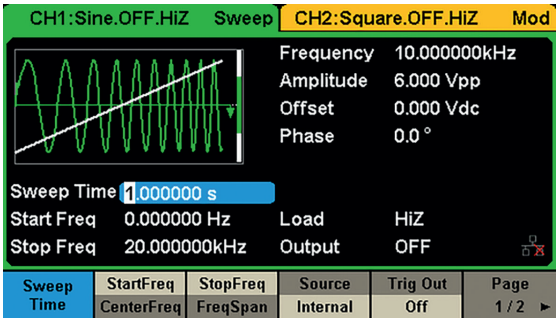
The T3AFG range of Function/Arbitrary Waveform Generators support a wide range of modulation types including AM, FM, PM, FSK, ASK, PSK and DSB-AM.



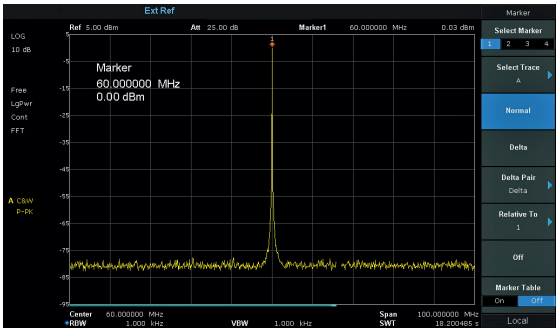
Burst mode supports 'N Cycle' and 'Gated' modes with the Burst source being configured as 'Internal', 'External' or 'Manual'.



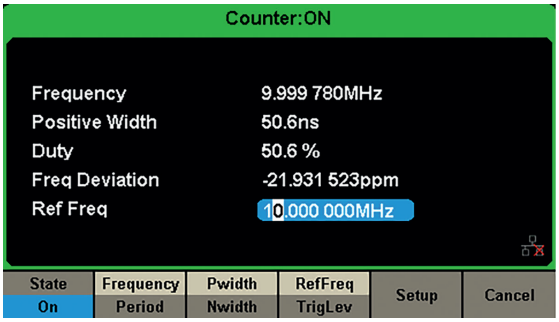
Output amplitude into a high impedance load can be as high 20 Vpp at frequencies up to 10 MHz, and 10 Vpp for frequencies greater than 20 MHz.



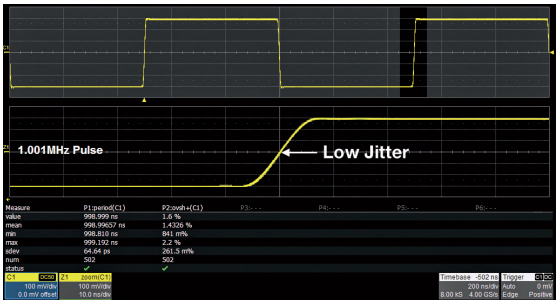
Sweep mode supports 'Linear' and 'Log' sweep, with 'Up' and 'Down' direction, and Sweep source can be configured as 'Internal', 'External' or 'Manual'.

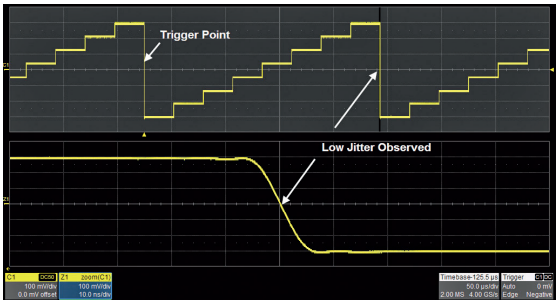


Sine wave output exhibits almost no spurious artefacts at 60 MHz and 0 dBm.



The counter functionality, accessed via the rear panel BNC, gives a DC or AC coupled counter capability from 100 mHz to 200 MHz.





The Teledyne Test Tools T3AFG30 and T3AFG60, with its low jitter design, can generate waveforms with exceptional edge stability. With better jitter performance comes better edge stability, and higher confidence in your circuit design.
